Original Papers

[Fetoscopic Laser Ablation for Twin-to-Twin Transfusion Syndrome: A 15-year Review of Perinatal Survival](#)

Ryan et al report on 155 cases of twin to twin transfusion syndrome laser ablation therapy. The dual survivor rate was 52.9%, and the single survival rate was 83.2%.

[Blood Pressure, Orthostatic Hypotension and Falls in Patients with Advanced Cancer](#)

Worrall et al address the issue of orthostatic hypotension and falls. They point out that older patients should be checked for orthostatic hypotension. In their study of patients with cancer, 19% did not have the falls risk tool completed.

[Temporal Trends in Traumatic Brain Injury](#)

Forrest et al describe 222 cases of traumatic brain injury. Falls accounted for 50% of cases, RTAs 26% of cases, and assault in 12% of cases. The neurosurgical intervention rate was 74%.

[Developmental Dysplasia of the Hip: An Audit of the Ultrasound Screening Programme](#)

Irvine et al report an audit of 992 infants who had hip ultrasound screening. Following the hip ultrasound 26% were referred to orthopaedics for further assessment. None of the babies who were scanned presented with a subsequent hip dislocation.

[Predictors and Outcomes for COVID-19 Re-Admissions in the Anticipate Cohort](#)

O' Kelly et al report that hospital readmission rate among Covid patients was 12%. The readmission was due either persistent symptoms or a new complication.

Short Reports

[A Quality Improvement Project on Seizure Referral Triage: Preliminary Outcomes and Implications for Further Research](#)

Dwyer et al evaluated 54 seizure referral letters using (NICE) guidelines. Patients were phoned by an epilepsy advanced nurse practitioner. 20 (37%) referrals were redirected, nine (20%) patients had medicine increased/adjusted. The study highlights a benefit of triage for suspected seizure referrals.

[Recurrent Postcoital Transient Global Amnesia Associated with Diffusion Restriction Within the Left Hippocampus](#)

Donlon et al describe a unique presentation of transient global amnesia triggered by sexual intercourse. The MRI showed a punctate area of diffusion restriction in the left mesial temporal lobe.

Case Reports

[The Challenges of Diabetes Diagnosis in Adult Populations in Primary Care Settings](#)

LI et al describe the diagnosis and management of a 43 year old male with type 2 diabetes who presented with lower back pain, urinary frequency, and nocturia.

[Unilateral Pulmonary Edema \(UPE\) Secondary to Mitral Regurgitation \(MR\)](#)

Tansey et al describe the radiological findings in unilateral pulmonary edema secondary to mitral regurgitation.
