

GP Consultant - Renal Dialysis Unit

We are seeking a qualified General Practitioner (GP) registered with the Medical Council on a long term basis. This will be an external engagement on a Consultant basis. Previous experience in renal medicine is desirable but not essential as full training in responsibilities will be provided, however an interest in Nephrology is expected.

What does the role involve?

As part of and working closely with the multi-disciplinary team, you will be responsible for assessing patient progress, making diagnoses and initiating/monitoring treatment plans. You will support the medical needs of patients to deliver high quality outcomes.

This is a part time role of 48 hours over 4 weeks. Current days are Monday to Friday managing your diary yourself in conjunction with the requirements of the unit.

Who is Fresenius Medical Care?

We are part of a global company treating over **344,000 patients worldwide** across **over 4,000 clinics**.

We also operate **44 production sites on all continents** to provide dialysis products such as dialysis machines, dialysers and related disposables. **1 in every 2 of all dialysis machines** used around the globe are manufactured by Fresenius Medical Care and we are the **3rd largest medical devices company in the world**.
